

My Philosophy

Hello,

I am Markus Stacks.

It is very important about the defense of dangers after think. Because there very often is a high propensity to violence, terrorist attacks and very good crime organized. This leads too higher risk.

Precautions, prevention and professional advice are first steps for the problem solution. There is less and less money in the registers of the countries. The state institutions (police) only can restrict the tasks to the most urgent one because of this.

Therefore professional safety agencies are very important with special knowledge, know how and very good equipment.

'Safety' is not only a simple concept but everybody the important for people. However, she is very often only treated very badly or inattentively.

This concept accompanies us for a whole life.

It causally is, however, social safety components, such as the preservation of the work place, the family supply, the retirement provision and the preservation of a good standard of living.

I advise, support and coordinate for you in the industry sector and also private sector.

Very often there are arguments like "not with me" or "I have an insurance".

The economizing mentality, mail-order house Security and the negative image for the line of business are also optimal prerequisites for crime and force.

This development isn't only dangerous for the society, she primarily endangers all people. The life saves consequence and tactically good safety equipment.

It is my philosophy to offer Security and service in high quality in the sensible connection at payable prices. All of us know, this quality has his price. Because of this, however, quality doesn't have to be expensive inevitably.

There nevertheless also are limits for the sensitive 'price' topic.

The market only orientates himself at the most favorable supplier. Cheap pay, high employee fluctuations and bad employees trained aren't a quality characteristic for me and promote only the negative image mentioned above.

Only a few people orientate themselves at the effectiveness.

One says in the building and construction trade: who cheaply builds builds two times! This is the logic the costs of the corrections are much higher as if one had invested a little more at once.

I don't sell any products but I advise you with tips and knowledge based on my 15 years experiences in the safety sector

- Protection of the employees from accidents and dangers
- Protection from thieves and house burglar
- Protection from fire
- and self-protection

sincerely yours

Markus Stacks
